519-615-4832

Skills

- Technical Mapping Software: ArcGIS Pro, ArcGIS Online, ArcGIS Field Maps, ArcCatalog, AutoCAD (basic exposure)
- Programming Development: Experience with Visual Studio2022 for coding and web development
- Database Management: Able to write and run SQL queries for reporting, analysis, and data selection
- Productivity Tools: MicrosoftOffice365(Word, Excel, PowerPoint, Outlook, Teams) used extensively for reporting, documentation and collaboration
- Bilingual Communication: Fluent in English and French, with the ability to communicate effectively with a wide range of clients and teams

Education & Certifications

Certification in Geographic Information Systems

September 2025 – April 2026

Fanshawe College, London, ON

- Completed a 1-year postgraduate GIS certification and co-op program (Grade: 3.6 GPA)

Bachelor of Arts in Geography

September 2020 – April 2024

Western University, London, ON

- Major in *Physical Geography*. Key coursework: Introductory GIS, Remote Sensing, Transport Geography, GIS, GISII, Intro to Urban Development, Conservation and Development, Geomorphology, Paleolimnology, Statistics, River Morphology

Professional Experience

GIS Student – Asset & Quality Management

May 2026 – Present

Municipality of Chatham-Kent

- Conduct field data collection for municipal assets using GPS-enabled mobile GIS tools to capture accurate spatial information in field environments
- Translate field-collected infrastructure and asset information into geospatial datasets and maps using ArcGIS and ArcGIS Field Maps
- Support spatial data maintenance, editing, and updates to ensure consistency between field observations and GIS databases
- Assist with QA/QC processes to validate geospatial data accuracy and improve municipal asset information reliability
- Collaborate with staff to support mapping deliverables, documentation, and spatial reporting for municipal operations

Project Experience

Road Asset Data Quality & Inspection Workflow

January 2026 – March 2026

- Conducted a municipal road asset data assessment using centerline roads open datasets in ArcGIS Pro
- Designed an asset-oriented GIS schema to evaluate missing infrastructure attributes relevant to municipal asset management
- Performed spatial analysis and QA/QC to identify data gaps and prioritize inspection needs
- Integrated traffic volume datasets (AADT) to support infrastructure prioritization decisions
- Designed and published a Survey123 field inspection workflow to support future mobile data collection

Pollinator & Invasive Species Web App

January 2026 – April 2026

- Collaborated with a team to develop an interactive geospatial web application visualizing ecological datasets across London, Ontario
- Used SQL, ArcGIS Pro and Visual Studio to manage, analyze, and visualize spatial data
- Integrated Google Maps API to support interactive mapping and user-friendly data visualization
- Performed spatial analyses (e.g. buffers, overlays, hotspots) to identify key biodiversity areas and support data-driven insights

Emergency Evacuation Modeling

December 2025

- Developed a GIS-based evacuation model simulating a hazardous rail incident scenario
- Applied a buffer and proximity analysis to define evacuation and exclusion zones
- Integrated transit network data to identify evacuation and accessibility routes
- Conducted population exposure analysis using census data
- Produced stakeholder-ready maps to support emergency planning and communication

Vehicle Collision Hotspot Analysis – Downtown Toronto, ON

February 2024

- Analyzed fatal and non-fatal collision data (2006-2021) to identify spatial and temporal crash hotspots
- Performed temporal analysis to detect time-of-day risk patterns
- Applied spatial statistics and visualization techniques using ArcGIS Pro
- Produced thematic maps to support transportation safety insight
